

NHI LUU

Lincoln, NE | (402) - 610 - 6030 | nluu05@gmail.com

EDUCATION

University of Nebraska-Lincoln

August 2024 – May 2028

Bachelor of Science in Software Engineering

Minor in Mathematics

Relevant Coursework: Software Engineering I, Software Engineering II, Software Engineering III, Human-Computer Interaction, Introduction to Discrete Structures, Data Modeling for Systems Development, Design and Analysis of Algorithms, Testing, Verification and Analysis, Computer Science Senior Design Project, Software Engineering Mentoring and Leadership

HONORS

- Susan Thompson Buffet Foundation Scholarship, August 2024 – Present
- The Dell Scholars Scholarship, August 2024 – Present
- Nebraska Achievement Scholar, August 2024 – Present

EXPERIENCE

Nebraska Interpretation Services LLC.

May 2026 - Present

Office Scheduler

- Managed interpreter scheduling through a specialized scheduling system, coordinating with healthcare providers, legal offices, and other clients while optimizing scheduling accuracy, resolving conflicts, and maintaining detailed digital records.
- Performed quality assurance on translated documents by reviewing content for accuracy and consistency, while organizing electronic files and improving document management practices to support efficient business operations.

University of Nebraska-Lincoln, First-Generation First-Year Research Internship

June – July 2024

Student Researcher

- Developed proficiency in MATLAB and LaTeX by applying them to problem-solving and documentation, enhancing technical and computational skills.
- Conducted research on optimization of denoising algorithms using mathematical modeling and computational methods, contributing to advancements in signal processing.

TECHNICAL SKILLS

Programming Languages: Python, Java, JavaScript, HTML, CSS

Tools & Technology: PyCharm, IntelliJ IDEA, VS Code, Git, Gitlab, MATLAB, LaTeX, MySQL

Collaborative Development & Debugging:

- Actively engage in team-based coding and pair programming to solve complex problems.
- Proficient in troubleshooting and debugging through collaboration, ensuring code quality and efficiency.

PROJECTS

Prescribed Burn Plan Evaluation App

Role: Developer

- Developed an application that integrates the OpenWeatherConnector API to assess weather conditions for prescribed burns based on user-specified criteria.
- Implemented a custom algorithm to calculate optimal burn conditions, showcasing strong problem-solving and algorithm development skills.

Crypto Portfolio & Price Tracker App

Role: Developer

- Designed SQLAlchemy-based MySQL database with user, coin, market, and historical data tables; implemented installer script for database setup.
- Integrated CoinGecko API for real-time pricing and top 100 coin data with validation and error handling.

AllergyPal Website

Role: Developer

- Developed a full-stack web application using HTML, CSS, and JavaScript, implementing user authentication (register/login), profile management, and allergy tracking interfaces to help users manage allergy information and emergency responses.
- Built interactive front-end features including dynamic user dashboards and a scanner module, improving usability for allergy monitoring and support within the application.

Zulip

Role: Open Source Developer

- Collaborated with a team of developers to implement wildcard ping functionality, allowing authorized users to mention groups of users based on configurable permissions.
- Developed and tested frontend and backend features using TypeScript, JavaScript, Python, Handlebars, HTML, and CSS while working within a large open-source codebase.
- Resolved bugs and validated feature behavior through testing to ensure accurate permission enforcement.
